### Help

If you are a Team Member in a HIPAA eligible workspace and want to access a non-HIPAA eligible workspace with a 7 day user session, you can create an alias (for example `name+workspace@gmail.com`).

## User Groups

A *User Group* is a set of Team Members with a set of shared policies. A Segment Team Member can be a member of one or many Groups. All roles in the Segment App are additive, which means that group membership can be assigned in addition to individual roles for a single team member. For example, a single user could inherit roles from a Group definition AND have access to additional resources through individually assigned roles.

## Tokens

You can generate tokens to programmatically access Segment resources using the [Segment Public API](#).

## Resources

Resources are the building blocks of Segment, and represent the different parts of your Segment deployment to which you can grant access. These include:

- Workspaces
- Sources
- Destinations
- Warehouses
- Spaces
- Protocols Tracking Plans

## Labels

Workspace owners can use Labels to grant users access to groups of resources. When you add a Label to a Source or Spaces, any users who are granted access to that Label gain access to those resources.

To create or configure labels, go to the **Labels** tab in your workspace settings. Only workspace Owners can manage labels for the entire workspace.
