## Recording Errors

Preact can be really useful for customer support. For that to work well you'll want to send error events to Preact.

All you have to do is add a "!" as the first character in the event name and Preact will recognize it as an error event. Properties sent with the event will also show up in Preact.

Here's a JavaScript example:

```
analytics.track('!Image upload error', {  
  File size: '890KB',  
  File extension: '.JPG',  
  Message: 'File size too large'  
});
```
