Config API

Help

```
yarn add @fullstory/segment-react-native-plugin-fullstory @fullstory/react-native  
# or  
npm install --save @fullstory/segment-react-native-plugin-fullstory @fullstory/react-native
```

Run `pod install` after the installation to autolink the FullStory SDK.

Usage

In your code where you initialize the analytics client call the `.add({ plugin })` method with an `FullStoryPlugin` instance.

```
// App.js

import { createClient } from '@segment/analytics-react-native';
import { FullStoryPlugin } from '@fullstory/segment-react-native-plugin-fullstory';

const segmentClient = createClient({
  writeKey: 'SEGMENT_WRITE_KEY',
});

const plugin = new FullStoryPlugin({
  // configurations
  enableFSSessionUrlInEvents: true,
});

segmentClient.add({ plugin });
```

Configurations

The plugin accepts a configuration object with the following properties:

PROPERTY	DESCRIPTION
enableFSSessionUrlInEvents	Insert FS session URL to Segment event properties. Defaults to <code>true</code> .
allowlistAllTrackEvents	Send all track events as FS custom events. Defaults to <code>false</code> .
enableIdentifyEvents	Enable Segment identify events to be sent as FS identify events. Defaults to <code>true</code> .
allowlistTrackEvents	An array of event names to allow to send to FullStory. To allowlist all events, use <code>allowlistAllTrackEvents</code> .
enableSendScreenAsEvents	Send screen events as FS custom events. Defaults to <code>false</code> .
enableGroupTraitsAsUserVars	Enable group event traits to be passed into FS user vars. Defaults to <code>false</code> .

Example

FullStory has included a simple React Native app that implements the plugin. See [example README](#) for additional instructions.
