Example Queries

To see all identifiers associated with a certain user, first look up the `segment_id` associated with the `external_id_value`. Then, query all `external_id_value`'s associated with the `segment_id`.

```
with t1 AS
  (SELECT segment_id
   FROM engage_identities.users_identities
   WHERE external_id_value = 'jane.doe@example1.com')
SELECT u.segment_id, created_source, external_id_type, external_id_value
FROM engage_identities.users_identities u
JOIN t1 on u.segment_id = t1.segment_id
```
