Help

Using Yarn:

```
yarn add @segment/analytics-react-native-plugin-braze-middleware
```

Usage

Follow the [instructions for adding plugins](#) on the main Analytics client:

In your code where you initialize the analytics client call the `.add(plugin)` method with an `BrazeMiddlewarePlugin` instance:

```
import { createClient } from '@segment/analytics-react-native';

import { BrazeMiddlewarePlugin } from '@segment/analytics-react-native-plugin-braze-middleware';

const segmentClient = createClient({
  writeKey: 'SEGMENT_KEY'
});

segmentClient.add({ plugin: new BrazeMiddlewarePlugin() });
```

Once enabled, this plugin will make it possible to use Braze with a Cloud Mode connection while limiting the number of `identify` calls from the client.
