Help

not Replay it. Additionally, if you have Privacy Controls configured to change how you route Red and Yellow data into or out of Segment, the standard controls respect the rules set by those Controls. For example, if you have a Privacy Control set up to block **Red** data at the Source-level, any new fields you classify in the Data Inventory as **Red** are also blocked from that Source. Only fields added to the Data Inventory are blocked by a Privacy Control.

Privacy Alerts

Alerts notify you when a new, unclassified data type appears in your Privacy Portal inbox. You can set up Slack alerts or a generic Source to pipe alerts to other tools you might prefer for events and notifications. We recommend setting up alerts to help you ensure your Inventory is always up to date.

 **Segment**

☐

Source
Send new unclassified data into a Segment Source.
Don't see the source you're looking for? [Create a new one for Privacy Events.](#)

To set up a Slack Alert:

- From the Privacy Portal screen, click the **Settings** tab, and if necessary click **Alerts**.
- On the **Slack Alerting** settings, set the toggle to **Enabled**.
- Enter the Slack webhook by following the in-app hyperlink.
- Enter the name of the #slack-channel to be send alerts to.
- Click **Save**.

you're all set!

To send alerts to a Segment Source:

- From the Privacy Portal screen, click the **Settings** tab, and if necessary click **Alerts**.
- On the **Segment Source** settings, set the toggle to **Enabled**.
- From the dropdown menu in the settings, select an existing Segment Source, or click the link to create a new Source. We recommend that you use the HTTP Source so you can easily send the data to wherever you prefer to consume alerts.
- Click **Save**.

you're all set!
