Documentation

What destinations support consent enforcement?

All event streams destinations, with the exception of AWS S3 and Engage destinations, support consent enforcement.

Can I share current end user consent preferences with my destinations?

You can use the Destination Actions framework to share the current status of your end-users' consent with your Actions destinations.

For more information, see the Sharing consent with Actions destinations documentation.

Can I use a Consent Management Platform (CMP) other than OneTrust to collect consent from my end users?

Yes, you can use any commercially available CMP or custom solution to collect consent from your end users. If you use a CMP other than OneTrust, you must generate your own wrapper or other mechanism to add the

following objects to the events collected from your sources:

- Includes the consent object on every event
- Generates the Segment Consent Preference Updated event every time a user provides or updates their consent preferences. This event must contain their anonymousId or userId.

Segment provides guidance about creating your own wrapper in the @segment/analytics-consent-tools GitHub repository.
